National Survey of Substance Abuse Treatment Services (N-SSATS): 2014

Data on Substance Abuse Treatment Facilities

ACKNOWLEDGMENTS

This report was prepared for the Substance Abuse and Mental Health Services Administration (SAMHSA), U.S. Department of Health and Human Services (HHS), by Synectics for Management Decisions, Inc. (Synectics), Arlington, Virginia. Data collection was performed by Mathematica Policy Research (Mathematica), Princeton, New Jersey. Work by Synectics and Mathematica was performed under Task Order HHSS283200700048I/HHSS28342001T, Reference No. 283-07-4803 (Cathie Alderks, Task Order Officer). See Appendix D of this report for the List of Contributors.

HIGHLIGHTS

This report presents results from the 2014 National Survey of Substance Abuse Treatment Services (N-SSATS), an annual census of facilities providing substance abuse treatment. Conducted by the Substance Abuse and Mental Health Services Administration (SAMHSA), N-SSATS is designed to collect data on the location, characteristics, and use of alcohol and drug abuse treatment facilities and services throughout the 50 states, the District of Columbia, Puerto Rico, and other U.S. jurisdictions. The 2014 data collection used an abbreviated questionnaire that collected selected facility characteristics but no client counts. It is important to note that values in charts, narrative lists, and percentage distributions are calculated using actual raw numbers and rounded for presentation in this report; calculations using rounded values may produce different results.

- The N-SSATS facility response rate in 2014 was 94 percent. Thirty states or jurisdictions had response rates that equaled or surpassed the overall rate [Tables 1.2 (in Chapter 1) and 4.1].
- A total of 14,152 facilities were eligible for this report [Table 1.1].

Trends in Facility Characteristics 2004-2014

- The *total number* of substance abuse treatment facilities increased slightly between 2004 and 2014. The number of eligible facilities responding to the 2014 survey increased by 5 percent, from 13,454 facilities in 2004 to 14,152 facilities in 2014 [Table 2.1].
- The *operational structure* of the substance abuse treatment system (i.e., the type of entity responsible for operating the facility: private non-profit, private for-profit, or government—local, state, federal,² or tribal) changed little between 2004 and 2014 [Table 2.2 and Figure 2].
- *Primary focus of facilities*—Substance abuse treatment services was the primary focus in 62 percent of all facilities in 2004, decreasing to 57 percent in 2014. During this same time period, facilities with a primary focus of a mix of mental health and substance abuse treatment services increased from 26 percent to 33 percent [Table 2.2 and Figure 3].
- *Type of care*—outpatient, residential (non-hospital), and hospital inpatient—experienced minor changes from 2004 to 2014 in terms of the proportion of facilities offering each type of care [Table 2.3 and Figure 4].

¹ Other jurisdictions include the territory of Guam, the Federated States of Micronesia, the Republic of Palau, Puerto Rico, and the Virgin Islands of the United States.

² Data for the federal agencies specified in the survey (the Department of Veterans Affairs, the Department of Defense, the Indian Health Service, and other unspecified federal agencies) are detailed in the tables.

• Opioid Treatment Programs certified by SAMHSA for the provision of medication-assisted therapy with methadone and/or buprenorphine were provided by 8 to 9 percent of all facilities between 2004 and 2014 [Table 2.4 and Figure 4].

Facility Operation—March 31, 2014

- Private non-profit organizations operated 55 percent of all facilities.
- Private for-profit organizations operated 33 percent of all facilities.
- Local governments operated 5 percent of all facilities.
- State governments operated 2 percent of all facilities.
- The federal government operated 2 percent of all facilities.
- Tribal governments operated 2 percent of all facilities [Table 3.1].

Primary Focus of Facility—March 31, 2014

- The provision of substance abuse treatment services was the primary focus of 57 percent of facilities.
- A mix of mental health and substance abuse treatment services was the primary focus of 33 percent of facilities.
- The provision of mental health services was the primary focus of 7 percent of facilities.
- General health care was the primary focus of 1 percent of facilities.
- Activities other than those listed above were the primary focus of 1 percent of facilities [Table 3.1].

Type of Care—March 31, 2014³

- Outpatient treatment was offered by 82 percent of all facilities.
- Residential (non-hospital) treatment was offered by 25 percent of all facilities.
- Hospital inpatient treatment was offered by 5 percent of all facilities [Table 3.2b].

Medication-assisted Opioid Therapy—March 31, 2014

- OTPs were available in 1,316 (9 percent) substance abuse treatment facilities [Table 2.3].
- Private for-profit organizations operated 55 percent of OTPs, however, overall, 33 percent of all substance abuse treatment facilities were operated by private for-profit organizations. [Tables 3.1 and 3.11b]

Facility percentages sum to more than 100 percent because a facility could provide more than one type of care.

CHAPTER 1

DESCRIPTION OF THE NATIONAL SURVEY OF SUBSTANCE ABUSE TREATMENT SERVICES (N-SSATS)

The 2014 National Survey of Substance Abuse Treatment Services (N-SSATS) was conducted from March 31, 2014, to December 5, 2014, with a reference date of March 31, 2014. It is the 37th in a series of national surveys that began in the 1970s. The surveys were designed to collect data on the location, characteristics, and use of alcohol and drug abuse treatment facilities and services throughout the 50 states, the District of Columbia, Puerto Rico, and other U.S. jurisdictions. The 2014 data collection used an abbreviated questionnaire that collected facility characteristics but no client counts. The Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration (SAMHSA), U.S. Department of Health and Human Services, plans and directs N-SSATS. This report presents tabular information and highlights from the 2014 N-SSATS. It is important to note that percentages in charts, narrative lists, and percentage distributions in tables may not add to 100 percent due to rounding.

N-SSATS is designed to collect information from all facilities⁵ in the United States, both public and private, that provide substance abuse treatment. (Additional information on N-SSATS, its history, and changes in the survey and survey universe over time is provided in Appendix A.)

N-SSATS provides the mechanism for quantifying the dynamic character and composition of the U.S. substance abuse treatment delivery system. N-SSATS collects multipurpose data that can be used to:

- Assist SAMHSA and state and local governments in assessing the nature and extent of services
 provided in state-supported and other substance abuse treatment facilities and in forecasting
 substance abuse treatment resource requirements;
- Update SAMHSA's Inventory of Behavioral Health Services (I-BHS), formerly called the Inventory of Substance Abuse Treatment Services (I-SATS), which includes all known drug and alcohol abuse treatment and mental health treatment facilities (see Appendix A);
- Analyze substance abuse treatment services trends and conduct comparative analyses for the nation, regions, and states;
- Generate the *National Directory of Drug and Alcohol Abuse Treatment Programs*, a compendium of facilities approved by state substance abuse agencies for the provision of substance abuse treatment; and

⁴ The other jurisdictions include the territory of Guam, the Federated States of Micronesia, the Republic of Palau, and the Virgin Islands of the United States.

⁵ In this report, entities responding to N-SSATS are referred to as "facilities." As discussed later in the report, a "facility" may be a program-level, clinic-level, or multi-site respondent.

• Update the information in SAMHSA's Behavioral Health Treatment Services Locator, which includes a searchable database of facilities approved by state substance abuse agencies for the provision of substance abuse treatment. The Treatment Services Locator is available on the Internet at:

https://findtreatment.samhsa.gov

Data Collection Procedures for the 2014 N-SSATS

Field period and reference date

The survey reference date for the 2014 N-SSATS was March 31, 2014. This survey was available to respondents from March 31, 2014, through December 5, 2014.

Survey universe

Table 1.1. The 2014 N-SSATS facility universe totaled 17,224 facilities. The universe is primarily based on the treatment facilities believed to be active treatment facilities or halfway houses that were on SAMHSA's I-BHS before the survey reference date, but it also includes facilities that were added by state substance abuse agencies or otherwise discovered during the first 3 months of the survey.

Table 1.1. N-SSATS facilities, by status and mode of response: 2014

Definition	Number	Percent
Total facilities in universe	17,224	100.0
Closed/ineligible	1,873	10.9
Facility no longer existed	883	5.1
Facility provided no substance abuse treatment	556	3.2
Duplicate facility	273	1.6
Satellite facility	98	0.6
Merged	40	0.2
Ineligible/other	23	0.1
Total eligible	15,351	100.0
Non-respondents	969	6.3
Respondents	14,382	93.7
Excluded from report ¹	230	1.5
Included in report	14,152	92.2
Mode of response	14,152	100.0
Web	11,839	83.7
Telephone	2,087	14.7
Mail	226	1.6

¹ Facilities excluded from the report included 117 non-treatment halfway houses, 96 solo practices not approved by the state agency for inclusion, and 17 facilities that treated incarcerated clients only.

Content

The 2014 N-SSATS questionnaire was an 8-page document with 29 numbered questions (see Appendix B). Topics included:

- Facility identification information
- Primary focus of facility
- Operating entity
- Type of care provided
 - Outpatient treatment services (regular outpatient treatment, intensive outpatient treatment, day treatment or partial hospitalization, detoxification, methadone/buprenorphine maintenance or extended-release, injectable naltrexone/Vivitrol® treatment)
 - Residential (non-hospital) treatment services (long-term—more than 30 days, short-term—30 days or fewer, detoxification)
 - Hospital treatment services (inpatient treatment, inpatient detoxification)
- Selected services offered (pharmacotherapies and residential beds for client's children)
- Clinical/therapeutic approaches
- Specifically tailored programs or groups provided for specific client types
- Provision of services in sign language and/or in languages other than English
- Website with information about facility's program
- Payment options accepted, including use of a sliding fee scale and/or treatment at no charge
- Operation of an Opioid Treatment Program (OTP) certified by SAMHSA and offering maintenance and/or detoxification with opioid drugs such as methadone or buprenorphine

Data collection

Three data collection modes were employed: a secure web-based questionnaire, a paper questionnaire sent by mail, and a telephone interview. Five weeks before the survey reference date of March 31, 2014, letters were mailed to all facilities to announce the survey. The letters also served to update records with new address information received from the U.S. Postal Service. During the last week of March 2014, a data collection packet (including the SAMHSA cover letter, state-specific letter of endorsement, information on completing the survey on the web, and a sheet of *Frequently* Asked Questions) was mailed to each facility. Initially, respondents could also request a paper questionnaire be sent to them. During the data collection phase, contract personnel were available to answer facilities' questions concerning the survey. Web-based support for facilities completing the questionnaire on the web was also available. Three weeks after the initial data collection packet mailing, thank you/reminder letters were sent to all facilities. The second packet mailing took place approximately 12 weeks after the initial mailing and included non-responding facilities and any additional facilities identified after the first mailing. The second mailing included a 2012 state profile along with the rest of first packet mailing materials. Approximately 8 weeks after the second packet mailing, all the facilities that had not responded to previous mailings were mailed a hard-copy questionnaire along with the second packet mailing materials. About 2 weeks after the

second mailing, telephone interviewing began. (While reminder calls are a usual step in the survey process, because this was an abbreviated survey, no reminder calls were made this round.) Those facilities that had not responded were telephoned and asked to complete the survey by computer-assisted telephone interview (CATI).

Facility status and response rate

Table 1.1 presents a summary of response rate information. There were 17,224 facilities in the survey universe. Of these facilities, 11 percent were found to be ineligible for the survey because they had closed or did not provide substance abuse treatment or detoxification. Of the remaining 15,351 facilities, 14,382 facilities (94 percent) completed the survey and 14,152 (92 percent of the respondents) were eligible for this report.

Quality assurance

The web questionnaire was programmed to be self-editing; that is, respondents were prompted to complete missing responses and to confirm or correct inconsistent responses.

All mail questionnaires were reviewed manually for consistency and for missing data. Calls were made to facilities to resolve unclear responses and to obtain missing data. After data entry, automated quality assurance reviews were conducted. The reviews incorporated the rules used in manual editing, plus consistency checks and checks for data outliers not readily identified by manual review.

Item non-response was minimized through careful editing and extensive follow-up. The item response rate for the 2014 N-SSATS averaged 99 percent across 129 separate items. Appendix C details item response rates and imputation procedures.

Facility Selection for the 2014 N-SSATS Report

Table 1.1. The N-SSATS questionnaire is sent to some facilities that are excluded from this report, as explained below. For this cycle, 230 of the 14,382 questionnaire respondents provided information but were deemed out of the scope of this report and excluded from the analyses presented here. The excluded facilities and reasons for exclusion fell into three categories:

- 117 facilities were halfway houses that did not provide substance abuse treatment. These facilities were included in the survey so that they could be listed in the *Directory* and the Locator.
- 96 facilities were solo practitioners. I-BHS and N-SSATS are designed to include facilities rather than individuals. Solo practitioners are listed and surveyed only if a state substance abuse agency explicitly requests that they be included in the survey. The excluded solo practitioners had not been identified for inclusion by a state substance abuse agency.
- 17 facilities were jails, prisons, or other organizations that treated incarcerated clients exclusively.

After the exclusion of 230 out-of-scope facilities, 14,152 eligible respondent facilities remained to be included in the 2014 N-SSATS report.

Survey Response Mode

Figure 1. The proportion of facilities using the web survey to respond to N-SSATS has increased steadily since introduction of the option in 2002. The percentage of facilities responding via the web increased from 20 percent in 2002 to 84 percent in 2014. To encourage web use this round, a hard-copy questionnaire was not sent until the third packet mailing, although facilities could request one earlier. Mail response declined from 48 percent in 2004 to 2 percent in 2014. Telephone response, which represents follow-up of facilities that had not responded by mail or web, also declined, from 22 percent in 2004 to 12 percent in 2012. However there was a slight increase in telephone response from 12 percent in 2012 to 15 percent in 2014.

Data Considerations and Limitations

As with any data collection effort, certain procedural considerations and data limitations must be taken into account when interpreting data from the 2014 N-SSATS. Some general issues are listed below; other considerations are detailed in Appendix A. Considerations and limitations of specific data items are discussed where the data are presented.

- N-SSATS attempts to obtain responses from all known treatment facilities, but it is a voluntary survey. There is no adjustment for non-response (6 percent in 2014).
- N-SSATS is a point-prevalence survey. It provides information on the substance abuse treatment system and its clients on the reference date. N-SSATS provides a "snapshot" of substance abuse treatment facilities and clients on an average day. Note: Information on clients is collected through the full questionnaire in odd numbered years; in 2014, the abbreviated questionnaire was used, so no client information was collected.

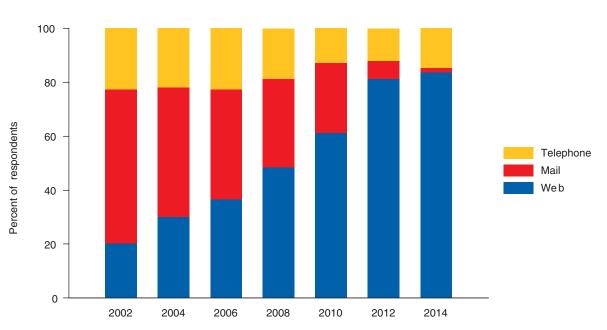

Figure 1. Survey Response Mode: 2002-2014

 Multiple responses are allowed for certain variables (e.g., services provided and specifically tailored programs). Tabulations of these variables include the total number of facilities reporting each response.

Organization of the Report

The balance of this report is organized into the following chapters.

- Chapter 2 presents trends in facility characteristics for 2004 to 2014.
- Chapter 3 describes key characteristics of facilities and the programs and services they provided in 2014.
- Chapter 4 presents state-level detail for most of the tables presented in Chapter 3.
- Appendix A provides additional information on N-SSATS, its history, and changes in the survey and survey universe over time.
- Appendix B contains the 2014 N-SSATS mail survey questionnaire.
- Appendix C contains information on item response and imputation.

Terminology

The majority of tables in the report are organized by facility operation, the primary focus of the facility, and the type(s) of care offered by the facility. Therefore, it is important to identify these terms.

- Facility operation indicates the type of entity responsible for the operation of the facility:
 - Private for-profit
 - Private non-profit
 - Government
 - Local, county, or community
 - State
 - Federal (Dept. of Veterans Affairs, Dept. of Defense, Indian Health Service, other)
 - Tribal
- While all facilities included in this report provide substance abuse treatment, *primary focus* indicates the services the facility primarily provides:
 - Substance abuse treatment services
 - Mental health services
 - A mix of mental health and substance abuse treatment services
 - General heath care
 - Other
- *Type of care* indicates the services the facility offers:
 - Outpatient
 - Regular

- Intensive
- Outpatient day treatment or partial hospitalization
- Outpatient detoxification
- Outpatient methadone/buprenorphine maintenance or extended-release, injectable naltrexone/Vivitrol® treatment
- Residential (non-hospital)
 - Short-term (30 days or less)
 - Long-term (more than 30 days)
 - Detoxification
- Hospital inpatient
 - Inpatient detoxification
 - Inpatient treatment

CHAPTER 2

TRENDS IN FACILITY CHARACTERISTICS

T his chapter presents trends in facility characteristics from 2004 to 2014.

Number of Facilities

Table 2.1. The total number of substance abuse treatment facilities increased slightly between 2004 and 2014. There was considerable turnover from year to year in the individual facilities responding to the survey: every year, although between 85 and 90 percent of the facilities responding to a given survey had also responded to the previous year's survey, some 10 to 12 percent of the facilities had closed, no longer provided substance abuse treatment, or didn't respond to the previous year's survey, but they were replaced by fairly similar numbers of new facilities.

There was a net increase of 4 facilities responding to the survey between 2013 and 2014, to a total of 14,152 facilities. Of the facilities responding to the 2014 survey, 89 percent had also responded to the 2013 survey and 11 percent were new to the 2014 survey or had not responded in 2013. Eleven percent of the facilities that responded in 2013 had closed, no longer provided substance abuse treatment, or did not respond to the survey in 2014.

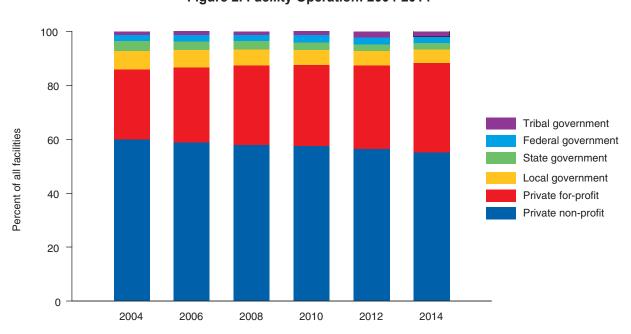

Figure 2. Facility Operation: 2004-2014

Despite the year-to-year changes in the facilities reporting, several core structural characteristics of the substance abuse treatment system remained stable from 2004 to 2014.

Facility Operation

Table 2.2 and Figure 2. The operational structure of the substance abuse treatment system (i.e., the type of entity responsible for operating the facility) changed slightly between 2004 and 2014.

- Private non-profit organizations operated 60 percent of all facilities in 2004 compared with 55 percent in 2014.
- Private for-profit organizations operated 26 percent of facilities in 2004, increasing slightly but steadily to 33 percent of facilities in 2014.
- Local, county, or community governments operated 7 percent of facilities in 2004, decreasing slightly but steadily to 5 percent in 2014.
- State governments operated 3 percent of facilities in 2004, decreasing slightly to 2 percent in 2014.
- The federal government operated 2 to 3 percent of facilities each year during the period of 2004 to 2014 ⁶
- Tribal governments operated 1 to 2 percent of facilities each year during the period of 2004 to 2014.

Primary Focus of Facility

Table 2.2 and Figure 3. The proportions of facilities with a specific primary focus (i.e., the services the facility primarily provides) had minor changes between 2004 and 2014.

- Facilities whose main focus was substance abuse treatment services declined from 62 percent to 57 percent of facilities during the period 2004 to 2014.
- Facilities whose primary focus was a mix of mental health and substance abuse services increased from 26 percent to 33 percent of facilities during the period 2004 to 2014.
- Facilities with a primary focus of mental health services made up 6 to 8 percent of facilities each year during the period of 2004 to 2014.
- Facilities with a primary focus of general health care made up 1 to 2 percent of facilities each year during the period of 2004 to 2014.
- Facilities whose main focus was other than those mentioned above made up about 1 to 3 percent of facilities each year during the period of 2004 to 2014.

Data for the federal agencies specified in the survey (the Department of Veterans Affairs, the Department of Defense, the Indian Health Service, and other unspecified federal agencies) are detailed in the tables.

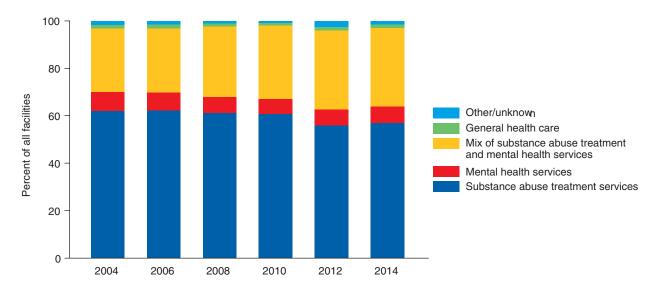

Figure 3. Primary Focus of Facilities: 2004-2014

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, National Survey of Substance Abuse Treatment Services (N-SSATS), 2004-2014.

Type of Care Offered

Table 2.3 and Figure 4. The proportions of facilities offering the major types of care—outpatient, residential (non-hospital), and hospital inpatient—changed a little between 2004 and 2014. Opioid Treatment Programs (OTPs), certified by SAMHSA, provide medication-assisted therapy with methadone, buprenorphine, and extended-release, injectable naltrexone/Vivitrol® (injectable naltrexone). Facilities with OTPs can be associated with any type of care. They were provided by 8 to 9 percent of all facilities between 2004 and 2014.

- Outpatient treatment was provided by 80 or 81 percent of facilities over most of this period and by 82 percent of facilities in 2014.
- Residential (non-hospital) treatment was provided by 27 percent of facilities in 2004, increasing to 28 percent in 2006 and decreasing to 25 percent in 2012 and 2014.
- Hospital inpatient treatment was provided by 8 percent of facilities in 2004, decreasing to 5 percent of facilities in 2014.
- Outpatient treatment was provided by 90 to 95 percent of OTP facilities.
- Residential (non-hospital) treatment was provided by 7 to 12 percent of OTP facilities.
- Hospital inpatient treatment was provided by 7 to 11 percent of OTP facilities.

Facilities that Use Medication-assisted Opioid Therapy

Table 2.4 and Figure 4. Medication-assisted opioid therapy (MAT) includes the use of methadone, and buprenorphine for the treatment of opioid addiction or dependence, and the use of extended-release, injectable naltrexone/Vivitrol® (injectable naltrexone) for relapse prevention in opioid addiction. Methadone is available only at the Opioid Treatment Programs (OTPs) that are

certified by SAMHSA's Center for Substance Abuse Treatment. Buprenorphine may be prescribed by physicians who have received DATA 2000 specific training and received a waiver to prescribe the medication for treatment of opioid addiction; some of these physicians are affiliated with facilities (either OTPs or other). All physicians or approved medical personnel can prescribe injectable naltrexone.

- The proportion of OTPs providing methadone-only treatment decreased from 76 percent of all OTP facilities in 2004 to 40 percent of all OTP facilities in 2014.
- The proportion of OTPs providing methadone and buprenorphine treatment increased from 20 percent of all OTP facilities in 2004 to 38 percent of all OTP facilities in 2014.
- The proportion of non-OTP facilities providing buprenorphine services increased from 6 percent of all non-OTP facilities in 2004 to 20 percent of all OTP facilities in 2014.
- The percentage of facilities providing injectable naltrexone treatment increased from 10 percent in 2012⁷ to 14 percent in 2014.

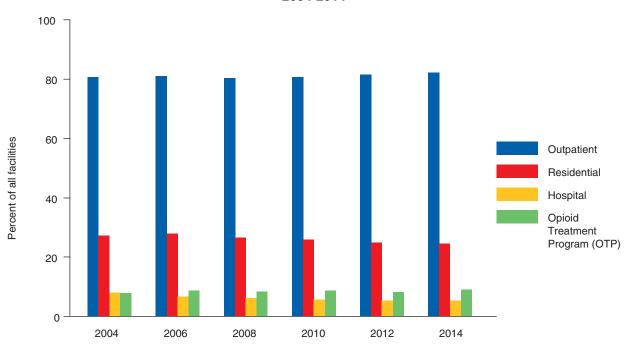

Figure 4. Type of Care Offered and Facilities with Opioid Treatment Programs: 2004-2014

⁷ Question on extended-release, injectable naltrexone/Vivitrol® was first added to N-SSATS questionnaire in 2012.

CHAPTER 3

FACILITY CHARACTERISTICS AND SERVICES

This chapter outlines key characteristics of facilities and programs in 2014.

Facility Operation

Table 3.1. Facilities were asked to designate the type of entity responsible for the operation of the facility.

• The proportions of all facilities by facility operation were:

Private non-profit organizations	55 percent
Private for-profit organizations	33 percent
 Local, county, or community governments 	5 percent
■ State governments	2 percent
■ Federal government ⁸	2 percent
Tribal governments	2 percent

Primary Focus of Facility

Table 3.1. While all facilities provided substance abuse treatment, they were asked to designate the facility's primary focus.

• The proportions of all facilities by primary focus of facility were:

Substance abuse treatment services	57 percent
Mix of mental health and substance abuse treatment services	33 percent
Mental health services	7 percent
General health care	1 percent
Other	1 percent

Type of Care Offered

Tables 3.2a and 3.2b. Type of care offered was made up of three broad categories (outpatient, residential [non-hospital], and hospital inpatient), each with several subcategories. A facility could offer more than one type of care. The proportions of all facilities offering the different types of care were:⁹

Data for the federal agencies specified in the survey (the Department of Veterans Affairs, the Department of Defense, the Indian Health Service, and other unspecified federal agencies) are detailed in the tables.

⁹ Facility percentages sum to more than 100 percent because a facility could provide more than one type of care.

82 percent
76 percent
45 percent
ed-release, 18 percent
12 percent
10 percent
25 percent
20 percent
13 percent
6 percent
5 percent
5 percent
4 percent

Three quarters (75 percent) of private non-profit facilities provided outpatient care and one third (33 percent) provided residential (non-hospital) care. In contrast, 92 percent of private for-profit facilities provided outpatient care and 12 percent provided residential (non-hospital) care.

Pharmacotherapies

Tables 3.3 and 3.4. Facilities were asked about the pharmacotherapies they provided.

- At least one pharmacotherapy was provided by 54 percent of all facilities; rates were higher in facilities primarily focused on general health care (86 percent) and in federal government-operated facilities (83 percent).
 - Overall, the most commonly reported Pharmacotherapy was "medications for psychiatric disorders." These medications were provided by 41 percent of all facilities; rates were higher in facilities primarily focused on general health care (80 percent) and in federal government-operated facilities (77 percent).
 - Buprenorphine was provided by 23 percent of all facilities, but by close to half of facilities primarily focused on general health care (47 percent) and in federal government-operated facilities (54 percent).

Clinical/Therapeutic Approaches

Table 3.5. Facilities were asked to indicate whether or not they used any of 13 specific clinical/therapeutic approaches.

- Two approaches were each used "always or often" by a high percentage of all facilities:
 - Substance abuse counseling was used "always or often" by 94 percent of facilities.
 - Relapse prevention was used "always or often" by 85 percent of facilities.

- A number of approaches were used at least sometimes (always, often, or sometimes) by more than half of facilities:
 - Cognitive-behavioral therapy was used at least sometimes by 93 percent of facilities.
 - Motivational interviewing was used at least sometimes by 91 percent of facilities.
 - Anger management was used at least sometimes by 83 percent of facilities.
 - Brief intervention was used at least sometimes by 83 percent of facilities.
 - Trauma-related counseling was used at least sometimes by 76 percent of facilities.
 - 12-step facilitation was used at least sometimes by 74 percent of facilities.
 - Contingency management/motivational incentives were used at least sometimes by 58 percent of facilities.
- Some approaches were used rarely or never, or were unfamiliar to more than half of all facilities:
 - Computerized substance abuse treatment was used rarely or never by 81 percent of facilities, and it was unfamiliar to an additional 4 percent of facilities.
 - Community reinforcement plus vouchers were used rarely or never by 77 percent of facilities, and it was unfamiliar to an additional 8 percent of facilities.
 - Rational emotive behavioral therapy was used rarely or never by 48 percent of facilities, and it was unfamiliar to an additional 4 percent of facilities.
 - The matrix model was used rarely or never by 46 percent of facilities, and it was unfamiliar to an additional 11 percent of facilities.

Specifically Tailored Programs or Groups

Tables 3.6 and 3.7. Facilities were asked about the provision of treatment programs or groups specifically tailored for specific client types. Overall, 75 percent of facilities offered at least one such program or group to serve a specific client type.

• The proportions of facilities providing specifically tailored programs or groups were:

 Clients with co-occurring mental and substance abuse disorders 	44 percent
Adult women	44 percent
■ Adult men	41 percent
■ Criminal justice clients (other than DUI/DWI) ¹⁰	34 percent
 Persons who have experienced trauma 	32 percent
■ DUI or DWI clients	28 percent
Adolescents	27 percent
■ Young adults ¹⁰	26 percent

¹⁰ Facilities treating incarcerated persons only were excluded from this report; see Chapter 1.

¹¹ Persons who have experienced intimate partner violence, domestic violence; persons who have experienced sexual abuse; and young adults were added as specific client types in the 2013 questionnaire. See Appendix A., Changes in Survey Content.

Persons who have experienced intimate partner violence, domestic violence ¹¹	23 percent
Persons who have experienced sexual abuse ¹⁰	22 percent
Pregnant or postpartum women	20 percent
Seniors or older adults	18 percent
Persons with HIV or AIDS	18 percent
Veterans	17 percent
Lesbian, gay, bisexual, transgender (LGBT) clients	17 percent
Members of military families	11 percent
Active duty military	9 percent

Services in Sign Language for the Hearing Impaired and in Languages Other than English

Table 3.8b. Facilities were asked about the provision of substance abuse treatment services in sign language for the hearing impaired. They were also asked if treatment was provided in languages other than English, if this treatment was provided by a staff counselor or by an on-call interpreter, and in what languages staff counselors provided treatment.

- Substance abuse treatment services in sign language for the hearing impaired were offered in 29 percent of all facilities. Facilities operated by local and state governments were most likely to offer these services (53 and 49 percent, respectively). By foci of activity, facilities with a mixed focus of mental health and substance abuse services or primary focus of mental health services (38 and 36 percent, respectively) were the most likely to offer services in sign language.
- Substance abuse treatment services in languages other than English were provided in 44 percent of all facilities, ranging from 22 percent of federal government-operated facilities to 60 percent of local government-operated facilities.
- Thirty-five percent of facilities providing services in languages other than English used only staff counselors who spoke other languages; another 24 percent of facilities used both staff counselors and on-call interpreters.
- Of the 3,740 facilities (26 percent of 14,152 facilities) where staff counselors provided services in languages other than English, Spanish was the most frequently spoken language (at 93 percent of those facilities). Services in American Indian/Alaska Native languages were provided by 3 percent of all facilities where staff counselors provided services in languages other than English.

Client Outreach

Table 3.9. Facilities were asked whether or not they had a website providing information about their substance abuse treatment programs.

- Information about a facility's substance abuse treatment programs was provided through websites by 81 percent of all facilities.
- Website availability ranged from 47 percent among facilities operated by tribal governments and 52 percent among facilities operated by the federal government to 87 percent among private non-profit facilities.

Website availability ranged from 63 percent among facilities whose primary focus was general
health care to 82 percent each among facilities whose primary focus was substance abuse treatment services or a mix of mental health and substance abuse treatment services.

Payment Options

Tables 3.10a-b. Facilities were asked to indicate whether or not they accepted specified types of payment or insurance for substance abuse treatment. They were also asked about the use of a sliding fee scale and if they offered treatment at no charge to clients who could not pay.

• The proportions of all facilities reporting acceptance of specific payment options were:

Cash or self-payment	90 percent
Private health insurance	67 percent
Medicaid	60 percent
State-financed health insurance	44 percent
Medicare	33 percent
Federal military insurance	34 percent

- Facilities operated by either federal or tribal governments were least likely to accept cash or self-payment (39 and 38 percent, respectively). Private for-profit facilities were less likely to accept Medicare than were facilities operated by private non-profits (23 and 37 percent, respectively). Federal government-operated facilities were less likely to accept state-financed health insurance than were facilities operated by state and local governments (20, 55, and 56 percent, respectively).
- Use of a sliding fee scale was reported by 61 percent of all facilities, ranging from 18 percent of facilities operated by the federal government to 81 percent of facilities operated by local governments.
- Facilities operated by tribal governments were most likely to accept IHS/638¹² contract care funds (77 percent).
- Treatment at no charge for persons who cannot afford to pay was offered by 47 percent of all facilities, ranging from 20 percent of private for-profit facilities to 79 percent of facilities operated by tribal governments.
- Acceptance of Access to Recovery vouchers was reported in 34 states. In states with ATR grants, the proportion of facilities accepting Access to Recovery vouchers ranged from 5 percent each in New Jersey and New York to 81 percent in Idaho [Table 4.10b].¹³

¹² Through a contract, tribes can receive the money that the Indian Health Service (IHS) would have used to provide direct health services for tribal members. Tribes can use these funds to provide directly, or through another entity, a broad range of health services. This option was part of P.L. 93-638 and is commonly known as "638 contracting."

¹³ Access to Recovery vouchers were available only in AK, AR, AZ, CA, CO, CT, DC, FL, HI, IA, ID, IL, IN, LA, MA, MD, MI, MO, MT, NH, NJ, NM, NY, OH, OK, OR, PA, RI, SD, TN, TX, WA, WI, and WY. See table 4.10b for the percentage of facilities accepting ATRs by state.

Facilities that Use Medication-assisted Opioid Therapy

Tables 3.11a-b and 3.12a-b. Opioid Treatment Programs (OTPs), are certified by SAMHSA to provide medication-assisted therapy in the treatment of opioid addiction. Currently, methadone and buprenorphine are the only opioid medications approved for the treatment of opioid addiction. Extended-release, injectable naltrexone/Vivitrol® (injectable naltrexone is approved for opioid addiction relapse prevention. Only OTPs may use methadone for the treatment of opioid addiction. Facilities with DATA 2000 waiver to physician may prescribe buprenorphine. Injectable naltrexone is available from physicians.

- Most facilities with OTPs offered outpatient treatment (90 percent); 87 percent offered outpatient methadone/buprenorphine maintenance or extended-release, injectable naltrexone/Vivitrol® treatment while 46 percent offered outpatient detoxification.
- Private for-profit organizations operated more than half (55 percent) of OTPs in 2014, and private non-profit organizations operated only about one third of OTPs (35 percent).
- Nine percent (1,312) of all 14,152 facilities had OTPs, 23 percent (3,280) of all facilities offered buprenorphine for medication-assisted opioid therapy, and 14 percent (1,935) of all facilities offered injectable naltrexone for medication-assisted opioid therapy.
- Methadone was provided at 97 percent of OTP facilities. Of the 1,312 facilities with OTPs, 40 percent (523) provided methadone only as a medication-assisted opioid therapy, and 57 percent (750) provided methadone as well as buprenorphine and/or injectable naltrexone.
- Of the 3,280 facilities offering buprenorphine, 23 percent (764) were in facilities with OTPs. The majority of facilities offering buprenorphine (2,516) as a medication-assisted opioid therapy were in facilities other than OTPs.
- Among the 1,935 facilities offering injectable naltrexone, 14 percent (275) were in facilities with OTPs, and 86 percent (1,660) were in facilities that were not OTPs.
- Private for-profit OTPs were more likely than private non-profit OTPs to offer methadone only (57 percent and 37 percent, respectively), whereas, private non-profit facilities with OTPs were more likely than private for-profit facilities to offer methadone and injectable naltrexone (80 percent and 8 percent, respectively).
- Eighty-six percent of all facilities that offered injectable naltrexone were either private non-profit or private for-profit facilities (51 percent and 34 percent, respectively). Seven percent of federal government operated facilities offered injectable naltrexone with the majority of those facilities within the Department of Veteran Affairs (6 percent). Three percent of state government operated facilities offered injectable naltrexone.
- Eighty-seven percent of all facilities offering buprenorphine were operated by either private non-profit or private for-profit organizations (50 percent and 38 percent, respectively). Six percent of the facilities offering buprenorphine were operated by the federal government with the majority being offered by the Department of Veterans Affairs (5 percent).

CHAPTER 4

STATE DATA

This chapter breaks down data presented in earlier chapters by state and jurisdiction. The Chapter 4 tables correspond to most of the tables presented in Chapters 3. Note that facilities operated by federal agencies are included in the states in which the facilities are located, although these facilities may have clients from other states.

Table 4.1 details the 2014 N-SSATS response rate.

Tables 4.2 to 4.11b present facility data for 2014.

Survey Response

Table 4.1. The overall response rate for the survey was 94 percent. Thirty states or jurisdictions had response rates that equaled or surpassed the overall rate.

Trends

Table 4.2. California and New York had the largest number of facilities in every year from 2004 to 2014, while Delaware and Vermont had the lowest number of facilities in every year from 2004 to 2014.

TABLES

Table 2.1. Facility turnover: Number and percent distribution, 2004-2014

Facility status ——		Number of facilities

¹ Numbers of facilities sum to more than the total and percentages sum to more than 100 because a facility could provide more than one type of care.

NOTES: Survey reference dates were March 31, 2004-2010, March 30, 2012, and March 31, 2014. See Appendix A for changes in the survey base, methods, and instruments that affect analysis of trends over time.

² Only those facilities that have Opioid Treatment Programs certified by the Substance Abuse and Mental Health Services Administration are included.

³ Injectable naltrexone = extended release, injectable naltrexone/Vivitrol®.

NOTE: Percentages may not sum to 100 percent because of rounding.

¹ Facilities operated by federal agencies are included in the states in which the facilities are located.

² A facility was ineligible if it had closed or was not providing substance abuse treatment or detoxification.

³ Response rate calculated as *Total respondents* divided by *Total eligible respondents*.

⁴ Of 14,382 total eligible respondents, this report excludes 230 facilities deemed out of scope for this report (117 non-treatment halfway houses, 96 solo practitioners not approved by the state agency for inclusion, and 17 facilities that treated incarcerated clients only). See Chapter 1 for details.

⁵ For the 14,152 facilities included in the report.

⁶ Includes the territory of Guam, the Federated States of Micronesia, the Republic of Palau, and the Virgin Islands of the United States.

MH = Mental health; SA = Substance abuse.

NOTE: Percentages may not sum to 100 because of rounding.

⁻⁻ Quantity is zero.

¹ Facilities operated by federal agencies are included in the states in which the facilities are located.

² Includes the territory of Guam, the Federated States of Micronesia, the Republic of Palau, and the Virgin Islands of the United States.

³ Every facility included in this report had a substance abuse treatment program, but not all facilities made providing substance abuse treatment their main emphasis or primary focus.

⁻⁻ Quantity is zero.

¹ Facilities operated by federal agencies are included in the states in which the facilities are located.

² Numbers of facilities sum to more than the *Total* column because a facility could provide more than one type of care.

³ Includes the territory of Guam, the Federated States of Micronesia, the Republic of Palau, and the Virgin Islands of the United States.

⁴ Injectable naltrexone = extended release, injectable naltrexone/Vivitrol®.

^{- -} Quantity is zero.

¹ Facilities operated by federal agencies are included in the states in which the facilities are located.

² Percentages sum to more than 100 percent because a facility could provide more than one type of care.

³ Includes the territory of Guam, the Federated States of Micronesia, the Republic of Palau, and the Virgin Islands of the United States.

⁴ Injectable naltrexone = extended release, injectable naltrexone/Vivitrol®.

¹ Facilities operated by federal agencies are included in the states in which the facilities are located.

² Numbers of facilities sum to more than the *Total* column because a facility could use more than one clinical/therapeutic approach.

³ This question used a Likert scale response: Always or Often, Sometimes, Never, Rarely, and Not familiar with this approach. This table combines responses of Always or Often and Sometimes.

⁴ Includes the territory of Guam, the Federated States of Micronesia, the Republic of Palau, and the Virgin Islands of the United States. SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, National Survey of Substance Abuse Treatment Services (N-SSATS), 2014.

¹ Facilities operated by federal agencies are included in the states in which the facilities are located.

² Percentages sum to more than the *Total* column because a facility could use more than one clinical/therapeutic approach.

³ This question used a Likert scale response: Always or Often, Sometimes, Never, Rarely, and Not familiar with this approach. This table combines responses of Always or Often and Sometimes.

⁴ Includes the territory of Guam, the Federated States of Micronesia, the Republic of Palau, and the Virgin Islands of the United States. SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, National Survey of Substance Abuse Treatment Services (N-SSATS), 2014.

DUI/DWI = Driving under the influence/driving while intoxicated.

¹ Facilities operated by federal agencies are included in the states in which the facilities are located.

² Numbers of facilities sum to more than the *Total* column and percentages sum to more than 100 because a facility could offer a specifically tailored program or group for more than one client type.

³ Includes the territory of Guam, the Federated States of Micronesia, the Republic of Palau, and the Virgin Islands of the United States.

Other jurisdictions ⁴	9		77.8	100.0	71.4	28.6		40.0	20.0	60.0

⁻⁻ Quantity is zero.

¹ Facilities operated by federal agencies are included in the states in which the facilities are located.

² Percentages of facilities based on facilities where languages services are provided by staff counselors only and by both staff counselors and on-call interpreters.

³ Facilities that offered services in any language other than English but did not have a valid response to language provider were classified as providing services by an on-call interpreter only.

⁴ Includes the territory of Guam, the Federated States of Micronesia, the Republic of Palau, and the Virgin Islands of the United States. NOTE: Percentages may not sum to 100 percent because of rounding.

APPENDIX A

N-SSATS BACKGROUND

Survey History

N-SSATS has evolved from national survey efforts begun in the 1970s by the National Institute on Drug Abuse (NIDA) to measure the scope and use of drug abuse treatment services in the United States. The sixth of these surveys, conducted in 1976, introduced the data elements and format that have formed the core of subsequent surveys. These include organizational focus, service orientation, services available, clients in treatment by type of care, and hospital inpatient/residential capacity. The 1976 survey, called the National Drug Abuse Treatment Utilization Survey, was repeated in 1977 and 1978.

In 1979, the National Institute on Alcohol Abuse and Alcoholism (NIAAA) became a cosponsor of the survey, alcoholism treatment facilities were added, and the study was renamed the National Drug and Alcoholism Treatment Utilization Survey. This survey was repeated in 1980 and 1982. In 1984, a one-page version called the National Alcoholism and Drug Abuse Program Inventory was used. In 1987, the full version of the survey was reinstated and renamed the National Drug and Alcoholism Treatment Unit Survey (NDATUS). NDATUS was conducted annually from 1989 to 1993.

In 1992, with the creation of SAMHSA, responsibility for conducting the survey shifted to SAMHSA's Office of Applied Studies (now the Center for Behavioral Health Statistics and Quality). The survey was redesigned, and it was conducted annually as the Uniform Facility Data Set (UFDS) survey from 1995 to 1998. During these years, the survey was conducted by mail with telephone follow-up of non-respondents. The 1999 survey year was a transition year during which the survey was redesigned and an abbreviated telephone survey of treatment facilities was conducted. In 2000, a redesigned full mail survey was reinstated with telephone follow-up; it was renamed the National Survey of Substance Abuse Treatment Services (N-SSATS). The reference date for the annual survey had always been the end of September or beginning of October. After the 2000 survey, the reference date was changed to the end of March, and no survey was conducted during 2001.

In 2000, the use of an Internet-based questionnaire was tested; beginning in 2002, all facilities were offered the opportunity to respond via the Internet.

Beginning in 2013, the full N-SSATS questionnaire (with client counts) alternates with an alternate version of the questionnaire. The full questionnaire, fielded in odd-numbered years, collects data on programs and clients; in the alternate (even-numbered) years, an alternate N-SSATS questionnaire collects the program information needed to update the substance abuse section of the Behavioral Health Treatment Services Locator and collects information on other facility-related topics.

N-SSATS in the Context of the Behavioral Health Services Information System (BHSIS)

N-SSATS is one of the three components of SAMHSA's Behavioral Health Services Information System (BHSIS—formerly the Drug and Alcohol Services Information System, or DASIS) that contain information on substance abuse treatment. The core of BHSIS includes the Inventory of Behavioral Health Services (I-BHS), until recently called the Inventory of Substance Abuse Treatment Services (I-SATS). I-BHS includes a continuously updated, comprehensive listing of all known substance abuse and mental health treatment facilities. The third component of BHSIS is the Treatment Episode Data Set (TEDS), a client-level database of admissions to and discharges from substance abuse treatment. Together, the components provide national- and state-level information on the numbers and characteristics of individuals admitted to alcohol and drug treatment programs and describe the facilities that deliver care to those individuals.

I-BHS is the list frame for N-SSATS. Facilities in I-BHS fall into two general categories and are distinguished by the relationship of the facility to its state substance abuse agency. These categories are described below.

Treatment facilities approved by state substance abuse agencies

The largest group of facilities (11,496 in 2014) includes facilities that are licensed, certified, or otherwise approved by the state substance abuse agency to provide substance abuse treatment. State BHSIS representatives maintain this segment of I-BHS by reporting new facilities, closures, and address changes to SAMHSA. The approved facility group also includes programs operated by federal agencies—the Department of Veterans Affairs (VA), the Department of Defense, the Indian Health Service—and Opioid Treatment Programs certified by SAMHSA. I-BHS records for federally-operated facilities are updated annually through lists provided by these agencies.

Some facilities are not licensed, certified, or otherwise approved by the state agency. Some private for-profit facilities fall into this category. States are able to indicate in the I-BHS that such facilities are approved for listing in the Locator/Directory.

Treatment facilities not approved by state substance abuse agencies

This group of facilities (2,656 in 2014) represents the SAMHSA effort since the mid-1990s to make I-BHS as comprehensive as possible by including treatment facilities that state substance abuse agencies, for a variety of reasons, do not fund, license, or certify. Many of these facilities are private for-profit, small group practices, or hospital-based programs. Most of them are identified through periodic screening of alternative source databases. (See *Special efforts to improve survey coverage* below.) State substance abuse agencies are given the opportunity to review these facilities and to add them to the state agency-approved list, if appropriate.

Survey Coverage

The use of I-BHS as the list frame for N-SSATS imposes certain constraints related to the unit of response and the scope of facilities included. In addition, the expansion of I-BHS in recent years to provide a more complete enumeration of substance abuse treatment facilities means that year-to-year comparisons of the numbers of facilities reporting to N-SSATS must be interpreted with caution.

¹⁴ The fourth BHSIS component is the National Mental Health Services Survey (N-MHSS).

Unit of response

N-SSATS is designed to collect data from each physical location where treatment services are provided. Accordingly, SAMHSA requests that state substance abuse agencies use the point of delivery of service (i.e., physical location) as the defining factor for a facility. Because of the different state administrative systems, however, there are some inconsistencies in implementation. For example, in some states, multiple treatment programs (e.g., detoxification, residential, and outpatient) at the same address and under the same management have separate state licenses. These are treated as separate by the state substance abuse agency, and are given separate I-BHS ID numbers. In other states, multiple sites are included as a single entity under a parent or administrative unit. In many of these cases, individual sites can report services data in N-SSATS, but client data (when collected) are available only at a higher administrative level. Beginning in 1995, efforts have been made to identify facility networks and to eliminate duplicate reporting by networks. For most facilities, reporting level remains consistent from year to year. However, beginning in 1998, an emphasis was placed on collecting minimum information from all physical locations, and this has resulted in an increase in the number of facilities.

Special efforts to improve survey coverage

The great majority of treatment facilities in I-BHS are administratively monitored by state substance abuse agencies. Therefore, the scope of facilities included in I-BHS is affected by differences in state systems of licensure, certification, accreditation, and the disbursement of public funds. For example, some state substance abuse agencies regulate private facilities and individual practitioners while others do not. In some states, hospital-based substance abuse treatment facilities are not licensed through the state substance abuse agency.

To address these differences, SAMHSA conducted a large-scale effort during 1995 and 1996 to identify substance abuse treatment facilities that, for a variety of reasons, were not on the inventory. Some 15 source lists were examined, and facilities not on the inventory were contacted to ascertain whether or not they provided substance abuse treatment. As expected, this yielded a number of hospital-based and small private facilities that were not on the inventory. (These facilities were surveyed in 1995 and 1996, but they were not included in the published results of the survey until 1997.) Analysis of the results of this effort led to similar but more targeted updates before subsequent surveys. Potential new facilities are identified using data from the American Business Index and the annual American Hospital Association survey, and SAMHSA's National Mental Health Services Survey (which was then called the Inventory of Mental Health Organizations), the source lists that yielded the most new facilities in 1995 and 1996. Survey participants, who are asked to report all of the treatment facilities in their administrative networks, also identify additional facilities during the survey itself. All newly identified facilities are initially included as not approved by the state substance abuse agency. State substance abuse agencies are given the opportunity to review these facilities and to add them to the state agency-approved list, if appropriate.

Expansion of survey coverage to include all sites within networks at which treatment was provided yielded a net increase of about 2,600 facilities between 1997 and 1998. These additions were not necessarily new facilities, but were facilities not previously included in the survey as separate sites. The number of facilities reporting continued to increase in 1999, but at a slower pace, a net increase of 1,800 facilities. The increase between 1998 and 1999 was in large part because of the

improved survey response rate (95 percent in 1999 vs. 90 percent in 1998). Between 2004 and 2014, the number of facilities eligible for inclusion in this report increased steadily, from 13,454 to 14,152. The total number is deceptive, however. There was significant turnover as facilities closed and others opened. (See Table 2.1.)

Data collection

Until 1996, state substance abuse agencies distributed and collected the facility survey forms. Beginning in 1996, data collection was centralized; and SAMHSA began mailing survey forms directly to and collected forms directly from the facilities and conducting follow-up telephone interviews with the facility director or his/her designee. In 2000, SAMHSA introduced an on-line trial web version of the questionnaire for a few facilities in addition to the hard-copy questionnaire. The web version of the questionnaire was fully implemented in 2002. The proportion of facilities using the web survey to respond to N-SSATS has increased steadily since its full inception in 2002.

Non-response

Beginning in 1992, SAMHSA expanded efforts to obtain information from non-responding facilities. A representative sample of non-respondents was contacted and administered an abbreviated version of the survey instrument via telephone. In 1993 and later years, this effort was extended to all non-responding facilities. In 1997, a series of measures was introduced to enhance the survey response rate. These included advance notification and improved methods for updating address and contact information. Between 2004 and 2014, use of these methods and intensive telephone follow-up resulted in an annual follow-up rate (i.e., facilities in the sample either completed the survey or were determined to be closed or otherwise ineligible) of 92 to 96 percent. In 2014, the final response rate among eligible facilities was 94 percent.

Exclusions

In 1997, facilities offering only DUI/DWI programs were excluded; these facilities were reinstated in 1998.

Facilities operated by the Bureau of Prisons (BOP) were excluded from the 1997 survey and subsequent surveys after SAMHSA conducted a separate survey of correctional facilities.¹⁵ During that survey, it was discovered that jails, prisons, and other organizations treating incarcerated persons only were poorly enumerated on the inventory. Beginning in 1999, these facilities were identified during the survey and excluded from analyses and public-use data files.

I-BHS and N-SSATS are designed to include specialty substance abuse treatment facilities rather than individuals. Solo practitioners are listed on I-BHS and surveyed in N-SSATS only if the state substance abuse agency explicitly requests that they be included.

Beginning in 2000, halfway houses that did not provide substance abuse treatment were included on the inventory and in N-SSATS so that they could be listed in the *National Directory of Drug and Alcohol Abuse Treatment Programs* and on the Treatment Facility Locator (https://findtreatment.samhsa.gov). These facilities are excluded from analyses and public-use data files.

DHHS Publication No. (SMA) 00-3380. Rockville, MD, 2000.

Changes in Survey Content

Table A.1 shows the major content areas for the survey from 1996 to 2014. Since 1992, SAMHSA has made adjustments each year to the survey design, both to minimize non-response and to include areas of emerging interest. For example, questions on the number of clients in treatment receiving specific medication-assisted opioid therapies have changed over the years: LAAM was replaced by buprenorphine in 2004 and extended-release, injectable naltrexone/Vivitrol® was added in 2013. Questions about clinical/therapeutic methods, standard practices, and Access to Recovery grants were added in 2007. Questions about facility smoking policy were added in 2011; questions about outpatient facility operating capacity and extended-release, injectable naltrexone/Vivitrol® as a pharmacotherapy were added in 2012; and questions about work activity and means to accomplish them (as well as the extended-release, injectable naltrexone/Vivitrol® client count question mentioned above) were added in 2013.

There have also been changes within content areas. For example, in response to concerns about over-reporting of programs or groups for specific client types, the survey question was revised in 2003 to distinguish between those facilities that accepted specific client types and those facilities that offered specially designed programs or groups for that client type. As a result, the number and proportion of facilities offering programs or groups for each of the specified client types decreased. Surveys from 2003 and later are believed to more accurately represent the number and proportions of facilities providing programs or groups for the specified client types. In addition, over time more categories have been added to the specific client types (e.g., persons who have experienced trauma, active duty military, members of military families, and veterans in 2012 and young adults, persons who have experienced sexual abuse, and persons who have experienced intimate partner violence, domestic violence in 2013). Because of the increase in client types, the question was split in 2013. The portion asking if specific client types were served was limited to adolescents, adult women, and adult men. In addition, programs or groups were described as "specifically tailored." In 2014, the first part of the question was revised again to collect another level of detail (i.e., the age range of males and females served, if any). The client types of adolescents, adult women, and adult men were added back to the second part of the question.

Starting in 2013, the full questionnaire alternates with an alternate version of the questionnaire. The alternate questionnaire, first introduced in 2014, collects the facility, program, and services information that are needed to update the Behavioral Health Treatment Services Locator. It omits Section B, which includes the client counts. Other changes to the 2014 questionnaire:

- The primary focus question, which was dropped from the 2013 questionnaire, was reinstated.
- The question asking if a facility operates an Opioid Treatment Program (OTP) was revised. The informational bullets describing OTPs were reworded and the response categories are more explicit about whether the facility operates an OTP and whether or not methadone and/or buprenorphine are used.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Uniform Facility Data Set (UFDS), 1996-1999; National Survey of Substance Abuse Treatment Services (N-SSATS), 2000, 2002-2014.

APPENDIX B

2014 N-SSATS QUESTIONNAIRE

This Appendix contains the hard copy version of the 2014 N-SSATS questionnaire. Facilities also had the option of responding to the questionnaire on the Internet. For those facilities that had not completed the survey after extensive follow-up efforts (see Chapter 1), the questionnaire was administered by computer-assisted telephone interview (CATI).

Of the responding eligible treatment facilities included in this report, 84 percent completed the questionnaire on the Internet, 15 percent completed it by CATI, and 2 percent completed it by mail [Table 1.1 and Figure 1].

Text versions of the Internet and CATI surveys are not included here because they are computer programs that contain complex skip patterns, are difficult to read, and are extremely long in text format.

OMB No. 0930-0106 APPROVAL EXPIRES: 01/31/2016 See OMB burden statement on last page

National Survey of Substance Abuse Treatment Services (N-SSATS)

March 31, 2014

Substance Abuse and Mental Health Services Administration (SAMHSA)

PLEASE REVIEW THE FACILITY INFORMATION PRINTED ABOVE.
CROSS OUT ERRORS AND ENTER CORRECT OR MISSING INFORMATION.

CHECK ONE

- Information is complete and correct, no changes needed
- All missing or incorrect information has been corrected

PLEASE READ THIS ENTIRE PAGE BEFORE COMPLETING THE QUESTIONNAIRE

Would you prefer to complete this questionnaire online? See the pink flyer enclosed in your packet for the Internet address and your unique user ID and password. You can log on and off the website as often as needed to complete the questionnaire. When you log on again, the program will take you to the next unanswered question. If you need more information, call the N-SSATS helpline at 1-888-324-8337.

INSTRUCTIONS

- All of the questions in this survey ask about "this facility." By "this facility" we mean the specific treatment facility or program whose name and location are printed on the front cover.
- Please answer ONLY for the specific facility or program whose name and location are printed on the front cover.
- For additional information about this survey and definitions of some of the terms used, please visit our website at http://info.nssats.com.
- If you have any questions, please contact:

MATHEMATICA POLICY RESEARCH 1-888-324-8337 NSSATSWeb@mathematica-mpr.com

IMPORTANT INFORMATION

* <u>Asterisked questions</u>. Information from asterisked (*) questions will be published in SAMHSA's *National Directory of Drug and Alcohol Abuse Treatment Programs* and will be available online at http://findtreatment.samhsa.gov, SAMHSA's online Behavioral Health Treatment Services Locator.

<u>Mapping feature in online Locator</u>. Complete and accurate name and address information is needed for the online Locator so it can correctly map the facility location.

Eligibility for *Directory* **and online Locator**. Only facilities designated as eligible by their state substance abuse office will be listed in the *Directory* and online Locator. Your state N-SSATS representative can tell you if your facility is eligible to be listed in the *Directory* and online Locator. For the name and telephone number of your state representative, call the N-SSATS helpline at 1-888-324-8337.

1.	Which of the following substance abuse services are offered by this facility <u>at this location</u> , that is, the location listed on the front cover?	*6.	What is the <u>primary</u> focus of this facility <u>at this</u> <u>location</u> , that is, the location listed on the front cover?
	MARK "YES" OR "NO" FOR EACH		MARK ONE ONLY
	<u>YES</u> <u>NO</u>		Substance abuse treatment services
	1. Intake, assessment, or referral 1 □ 0 □		2 ☐ Mental health services

	and outcomes)?	7a.	Which Federal Government agency?
	MARK ALL THAT APPLY		MARK ONE ONLY
	Substance abuse clients	*	☐ Department of Veterans Affairs
	² ☐ Clients other than substance abuse clients		2 □ Department of Defense
	3 ☐ No clients are offered mental health		₃ ☐ Indian Health Service
	treatment services		4 ☐ Other (Specify:)
2.	DID YOU ANSWER "YES" TO <u>DETOXIFICATION</u> IN OPTION 2 OF QUESTION 1 ABOVE? 1 □ YES → SKIP TO Q.4 (BELOW)	*8.	What telephone number(s) should a potential client call to schedule an intake appointment? 1. () ext
l —	- ₀ □ NO		2. (ext
3 .	DID YOU ANSWER "YES" TO SUBSTANCE ABUSE TREATMENT IN OPTION 3 OF QUESTION 1?	*9.	Which of the following pharmacotherapies are dispensed, prescribed, or administered by this
			facility <u>at this location</u> , that is, the location listed
	 □ NO → SKIP TO Q.23 (PAGE 6) 		on the front cover?
	0 L 110 2 3 (1 AGE 0)		MARK ALL THAT APPLY
↓ 4.	Is this facility a jail, prison, or other organization that provides treatment <u>exclusively</u> for incarcerated persons or juvenile detainees?		 □ Disulfiram (Antabuse®) * 2. □ Naltrexone (oral) * 3. □ Vivitrol® (injectable Naltrexone) 4. □ Acamprosate (Campral®)
	1 ☐ YES → SKIP TO Q.29 (PAGE 6)		 □ Nicotine replacement
	· ₀ □ NO		 Non-nicotine smoking/tobacco cessation medications (for example, Bupropion, Varenicline)
5.	Is this facility a solo practice, meaning, an office with only one independent practitioner or		7. ☐ Medications for psychiatric disorders* 8. ☐ Methadone
	counselor?		* 9. ☐ Buprenorphine with naloxone (Suboxone®)
	1□ YES		*10. Buprenorphine without naloxone
	o □ NO		 □ We do not offer any of these pharmacotherapy services

*10. Does this facility operate an Opioid Treatment Program (OTP) at this location?

- OTPs are certified by SAMHSA's Center for Substance Abuse Treatment (CSAT) to dispense the opioid drugs methadone and buprenorphine for the treatment of opioid (narcotic) addiction.
- Almost all SAMHSA-certified OTPs dispense methadone, some dispense both methadone and buprenorphine, and a few dispense only buprenorphine.
- Facilities that are not OTPs may prescribe (not dispense) buprenorphine for their patients if they have a specially qualified physician on staff. Therefore, not all facilities that prescribe buprenorphine are OTPs.

MA	IRK	ON	ΙE	ON	JL	1

	1 🗆	Yes, this facility operates a SAMHSA-certified Opioid Treatment Program (OTP) and dispenses methadone and/or buprenorphine
╽┕	2 🗆	No, this facility is not a SAMHSA-certified OTP but it prescribes buprenorphine for the treatment of opioid addiction
	з 🗆	No, this facility does not use methadone or buprenorphine to treat opioid addiction → SKIP TO Q.11 (BELOW)
10a.	Are	ALL of the substance abuse clients at this facility currently receiving methadone or buprenorphine?
	1 🗆	YES
	o 🗆	NO

*10b. Does the program for opioid addiction at this location provide maintenance services, detoxification services, or both?

MARK ONE ONLY

PLEDGE TO RESPONDENTS: The information you provide will be protected to the fullest extent allowable under Section 501(n) of the Public Health Service Act (42 USC 290aa(n)). This law permits the public release of identifiable information about an establishment only with the consent of that establishment and limits the use of the information to the purposes for which it was supplied. With the explicit consent of eligible treatment facilities, information provided in response to survey questions marked with an asterisk will be published in SAMHSA's National Directory of Drug and Alcohol Abuse Treatment Programs and the online Behavioral Health Treatment Services Locator. Responses to non-asterisked questions will be published only in statistical summaries so that individual treatment facilities cannot be identified.

Public Burden Statement: An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control number for this project is 0930-0106. Public reporting burden for this collection of information is estimated to average 25 minutes per respondent, per year, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to SAMHSA Reports Clearance Officer, 1 Choke Cherry Road, Room 2-1057, Rockville, Maryland 20857.

APPENDIX C

ITEM RESPONSE AND IMPUTATION FOR 2014 N-SSATS

This Appendix contains Table C.1, a list of item response rates for questions from the N-SSATS 2014 questionnaire. Item non-response was minimized through careful editing and extensive follow-up.

The item response rate for the 2014 N-SSATS averaged 99 percent across 129 separate response categories.

Item non-response was 10 percent or more for only 2 of 129 separate response categories.

There was no imputation for 2014 N-SSATS data.

APPENDIX D

LIST OF CONTRIBUTORS

This report was prepared by Synectics for Management Decisions, Inc. (SMDI), and by the Center for Behavioral Health Statistics and Quality (CBHSQ), Substance Abuse and Mental Health Services Administration, U.S. Department of Health and Human Services (HHS). Work by SMDI was performed under Contract No. HHSS283200700048I/HHSS28342001T.

The report was written by Parth Thakore and Anand Borse under the direction of Doren Walker (Project Director) and Hongwei Zhang (Director of Data Analysis and Reports) at SMDI.

Production of the report at SAMHSA was managed by Cathie Alderks. SAMHSA contributors and reviewers, listed alphabetically, include: Cathie Alderks, Herman Alvarado, Jamie Teufel, and Nichele Waller.
